(That's a good question.)

[음악산업에 대한 의견] In my point of view, Korean music industry is currently growing fast through YouTube or all kinds of multimedia contents.

[과거 음악산업에 대한 정보] However, many years ago, the music market in Korea faced a serious crisis. Sales in the music industry dropped and artists' income had been decreased. The reason was with many free music sites came online, the market for CDs and tapes has decreased and music files were released as an mp3 download. Also, some free music sites provided free mp3 files through music sharing programs like 'soribada' in Korea.

[현재 음악산업에 대한 정보] But nowadays, music is protected under copyright laws. In addition, the quality of the music draws more people.

[개인적인 의견] Sometimes, I think people focus on singers' looks and images too much, but you can't really ignore the beauty of the artists' movement with the music.
