ecosystems. Further, the damage does not end with the displacement of native competitors; the new species is often unsuitable as food for species further up the food chain. The negative effects thus spread through the whole ecosystem.

Second, the introduction of new species often destroys the local environment. For example, the cane toad, native to South Africa, was introduced to Australia, where its number has increasingly spread at an alarming speed and has had harmful effects on the local environment. The cane toad, a natural predator, has killed a large number of native species in Australia. In addition to this, its fatal venom sometimes poses a direct threat to children and pets when touched.

Finally, the negative impact caused by the introduction of new species often leads to a certain number of economic burdens. For example, mesquites, a shrub native to America, were introduced to Africa. After the introduction of mesquites, commonly planted for land restoration and as a source of forest products, they started to displace native species in Africa. As a result, African governments are forced to commit economic and bureaucratic resources to control the replacing of native species by mesquites.

- ✓ **들리는 건 모조리 ?**

Grammar Tips

✓ 과거 사건에 대해 말 할 때

➤ **could / may / might have p.p.**

... 있을 수도 있었다 ...

e.g. The stones could / may / might have been used
as a weapon for hunting or fighting.

참고 가정법

e.g. If the stones had not been fragile, the stones might / could have been used
as a weapon for hunting or fighting.

➤ **would have p.p.**

‘(아마도) ...했을 것이다’

e.g. Plant-eating dinosaurs died from the climate changes caused by the asteroid that hit
the Earth. Eventually, other dinosaurs that ate these plant- eating dinosaurs would
have also died of starvation.

참고 가정법

e.g. If I had not gotten my parents' advice, I would have married her.

Check-Up Drills

Sample

그 바다소는 그들의 주된 음식(major source of food)의 감소(decline)를 초래한 생태 변화 때문에
멸종했을 수도 있었다.

⇒ The sea cows could (= may / might) have become extinct because of ecological changes
that caused a decline in their major source of food.

Vocabulary become extinct 멸종하다 | ecological 생태적인

지구(the Earth)에 충돌한 그 소행성에 의해 야기된 그 기후 변화(the climate changes) 때문에 어디에서 도(anywhere) 먹이(food)를 찾는 것이 어려웠다. 결과적으로(As a result), 그들은 아주 긴 거리(quite long distances)를 걸어야 했을 것이다.

⇒ Food was hard to find anywhere because of the climate changes caused by the asteroid that hit the Earth. As a result, they would have had to walk quite long distances.

Vocabulary hit ~에 충돌하다 | asteroid 소행성
